

Excel Charts

Length: 1 Day

Format: Instructor-Led, Classroom

Prerequisites: Introduction to and Intermediate Excel or equivalent knowledge..

Objectives

Large worksheets filled with numbers do not do a good job of allowing the user to see trends or spot inconsistencies. This is best done with a chart. Learn to create a wide range of charts from the basic Column, Pie, and Stock charts through combination (Bar and Line) charts to the more exotic waterfall and floating charts. Polish charts by learning how to refine the chart's format. Then learn how to create and use custom formats to make future charts easier and more consistent.

Course Outline

Creating Charts

- Creating charts
- Moving and resizing a chart
- Changing the chart type and sub-type
- Adding a legend
- Charting non-adjacent ranges
- Changing the chart location
- Adding titles

Formatting Charts

- Formatting chart objects
- Formatting the data series
- Formatting an axis
- Adding and removing gridlines
- Adding a data table
- Creating and using a user-defined chart format
- Adding a text box to a chart
- Adding a secondary axis
- Changing the axis scale
- Using Fill Effects
- Deleting a chart
